

Encompass

Environmental Policy

Encompass Group actively reduces the effects of its activities on the environment, such as minimising CO2 emissions, using recycled materials and where possible provide various recycling waste stream facilities.

Encompass Group Limited and its subsidiary companies, considers the effect of its activities on the environment and takes responsible steps to minimise any harmful effects of those activities. An awareness of legislation is maintained so that satisfactory requirements can be met, enabling us to minimise our environmental impact.

We generate electricity from our own solar panels whenever possible and supplement this with 100% green gas and electricity when required. We recycle steel, copper, plastic, wood and food wrappers. Remaining waste materials are sent for energy reclamation. We have invested in low energy LED lighting and are introducing a range of other energy reduction initiatives.
